

# Natural Dream Home

go  
green

**UP FRONT** Looking to "green" up your laundry room? Consider a front-loading washer. Energy efficiency, minimal water usage and excellent results are just some of the benefits. When shopping, look for the Energy Star® logo, then compare machines by reading the yellow Energy Guide stickers. Also consider the washer's spin speed. The greater the speed, the less moisture your garments will retain—and the less it will cost to dry them.

## THE DETAILS

**CLEAN AND GREEN** Asko's W6222 washer cleans better than any other washing machine we've found, and it does so while using less electricity, less water and less detergent. The T712 dryer's built-in SensiDry™ system includes a temperature sensor that prevents shrinking, creasing and overdrying, so you never use more energy than necessary. In total, the pair can save about \$300 a year on electricity, water, bleach and detergent.

**COUNTER INTELLIGENCE** A great green option that is perfect for a hard-working space, natural quartz Cambria countertops are twice as strong as granite,

non-porous, and have a stain-resistant surface that is certified by NSF International for safe food preparation and the GreenGuard Environmental Institute for indoor air quality. Cambria also recovers and recycles 98 percent of the water used in its polishing processes.

**SAFE STORAGE** Throughout the Natural Dream Home, Kamtz Co. installed custom cabinetry fashioned from Roseburg Forest Products' SkyBlend™ particleboard, a SCS-certified, 100-percent pre-consumer recycled wood fiber product that has no urea formaldehyde added during the manufacturing process.
